

Evaluación diagnóstica

Nombre: _____ Paralelo: _____ Fecha: _____

1. Calcula la equivalencia de longitud.

- $36,8 \text{ m} = \underline{\text{3680}} \text{ cm}$
- $7,56 \text{ dm} = \underline{\text{756}} \text{ mm}$
- $0,89 \text{ km} = \underline{\text{890}} \text{ m}$
- $62,5 \text{ dam} = \underline{\text{0,625}} \text{ km}$
- $105,7 \text{ mm} = \underline{\text{0,1057}} \text{ m}$
- $10,8 \text{ hm} = \underline{\text{1,08}} \text{ km}$

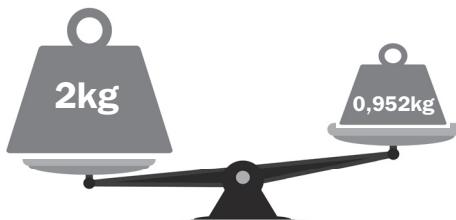

2. Calcula la equivalencia de masa.

- $0,34 \text{ t} = \underline{\text{340}} \text{ kg}$
- $2,04 \text{ kg} = \underline{\text{2040}} \text{ g}$
- $4,47 \text{ dag} = \underline{\text{44,7}} \text{ g}$
- $147,2 \text{ dg} = \underline{\text{1,472}} \text{ dag}$
- $92,5 \text{ mg} = \underline{\text{0,0925}} \text{ g}$
- $7,8 \text{ g} = \underline{\text{0,078}} \text{ hg}$

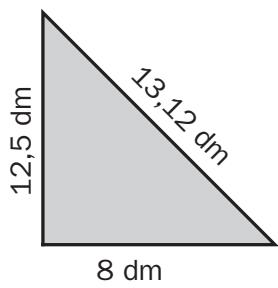

3. Calcula la equivalencia de capacidad.

- $9 \text{ kl} = \underline{\text{90 000}} \text{ dl}$
- $743 \text{ dal} = \underline{\text{743 000}} \text{ cl}$
- $0,3 \text{ hl} = \underline{\text{300}} \text{ dl}$
- $620 \text{ ml} = \underline{\text{0,62}} \text{ l}$
- $15 \text{ l} = \underline{\text{0,015}} \text{ kl}$
- $102 \text{ ml} = \underline{\text{1,02}} \text{ dl}$

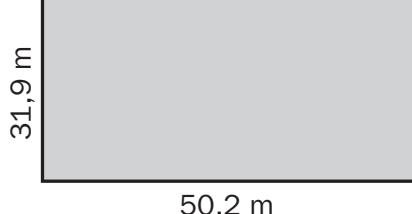

4. Calcula cuánto peso falta para equilibrar la balanza.

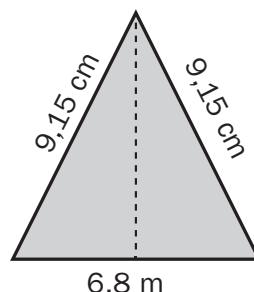

5. Calcula el perímetro de las siguientes figuras.

$$P = \underline{\text{33,62}} \text{ dm}$$

$$P = \underline{\text{164,2}} \text{ m}$$

$$P = \underline{\text{25,1}} \text{ cm}$$
